(54) SESSION MANAGEMENT SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To enable the same user to execute a plurality of applications in the same session in a client/server system without complicating the constitution of the application executed on a client computer side.

SOLUTION: A network client module 107 on a client computer 105 establishes a network communication link 110 at every session between the module 107 and a network server module 103 on a server computer 101 and registers the link IDs and session information corresponding to the sessions on a client session management table 108. At the same time, the module 107 establishes a local communication link 109 between the module 107 and each application 106 and connects the local communication links 106 corresponding to a plurality of applications 106 having the same link ID to the same network communication link 110 by referring to the client session management table 108.

LEGAL STATUS

[Date of request for examination]   27.12.2002

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
